Fault	Injected how	What Kubernetes does	Correct action
F1 bad deploy	EXTRA_LATENCY 300 ms–1 s on catalog (configuration rollout)	nothing: pods healthy, bad template is the spec	RESTORE catalog
F2 hot pod	CPU stress (1–2 workers) inside one cart or currency pod (Chaos Mesh)	nothing: pod alive	RESTART that service
F3 scaled to 0	cart or currency set to 0 replicas	nothing: 0 is the desired state	RESTORE (or SCALE_UP) that service
F4 surge	load × 2.5 or × 3 (Locust users)	HPA adds frontend pods; default does nothing	SCALE_UP frontend
NULL	no fault (tests false alarms)	—	do nothing (NOOP)
