	Hypothesis	Result	Evidence
H1	Faster recovery than Kubernetes and HPA	◐ partly	F1–F3 vs both, F4 vs Kubernetes: yes F4 vs HPA: HPA faster (δ −0.58, p .031)
H2	As fast as the runbook (margin 20 s); lower SLA penalty	◐ partly	MTTR CI [−20.0, +0.9] s: non-inferior SLA penalty: tie (p .66)
H3	Runbook warm start helps	✓ supported	early return p 6.5e-9; MTTR p 4.4e-5 (cold start 100 episodes)
H4	Safe: no false remediation, no violations	✓ supported	0/10 NULL episodes, 0/30 in training, 0 safety violations
H5	Holds under a degraded link (netem)	✗ not established	CI upper bound 20.15 s vs margin 20 s (n = 16 per policy)
